\*"On ARV" means the patient had at least one outpatient prescription or inpatient medication filled for an FDA approved ARV.

\*\*\*"Clinical AIDS" means that the patient record includes a diagnosis of an AIDS defining condition as outlined in the 1993 CDC

\*\*\*"AIDS + ARV" means the patient met criteria for both ARV and Clinical AIDS as described above.

- 1) Zip codes were used to identify state. We don't know the accuracy of these codes (e.g. are these current?).
- 2) The period covered by this analysis was October 1, 2004 through September 30, 2005. The number of true unique patients system-wide is 22,800
- 3) Veterans seen at more than one VA facility are counted at each one as there is no way to assign a primary facility. The number of facility level records in care in the FY05 period were 25,945. There were 2,279 veterans seen at more than one facility (likely at sites in close proximity across a state line).
- 4) In care was defined as any utilization at a given VA facility.
- 5) Table term "On ARV" means the patient had at least one outpatient prescription or inpatient medication filled for an FDA approved ARV.
- 6) Table term "Clinical AIDS" means that the patient record includes a diagnosis of an AIDS defining condition as outlined in the 1993 CDC case definition, and does NOT consider CD4 lymphocyte count or percentage. The diagnosis may have been entered at any time, not only during the FY05 report period.
- 7) Table term "AIDS + ARV" - meet criteria for on ARV and a Clinical AIDS diagnosis means the patient met criteria for both ARV and Clinical AIDS as described above.
